Investment Policy
The Supervised Global Income Fund ARSN 600 244 102 (SGIF or Fund) is an Australian Dollar International Debt Securities managed investment scheme.

The Investment Manager aims to provide returns by investing in a portfolio of debt securities and derivatives, using economic analysis and asset research which is combined with historic worst case stress testing to search for and discover the lowest risk/best reward investment opportunities in the global and domestic debt markets.

Investments may include, but are not restricted to debt instruments such as government treasury bonds, corporate bonds, bank bills, commercial paper, bank loans, mortgage backed securities, asset backed securities, mortgages, secured corporate loans, discounted bills, repurchase agreements and debt/equity hybrid securities, forward foreign exchange agreements, interest rate futures, options and interest rate swaps. The Investment Manager does not intend to borrow or use leverage in the Fund.

Unit Price and Performance Update
The Fund’s net asset value (NAV) is calculated daily and represents the value of the Fund’s assets less the value of the liabilities of the Fund (including the Fund’s fees, costs and taxes). The value of a unit is then calculated by dividing the Fund’s NAV by the number of units on issue in the Fund.

Fund returns have been calculated using NAV unit prices and assume the reinvestment of distributions.

Fund Unit Value including distributions since inception versus its Benchmark*

* Benchmark changed on 31-7-13 from RBA Cash Rate plus 1.00% to RBA Cash Rate +1.5% and on 18-5-16 from RBA Cash Rate plus 1.5% to the Bloomberg AusBond Bank Bill Index plus 2.5%
**Investment Manager's commentary**

The Fund returned 0.37% net of fees in the month of September 2017. A distribution of 23 cents per unit was paid to our investors. This is the first distribution for 2017-18 financial year.

Given US Central Bank policy leads the Western World we believe that inflation in the US could influence monetary policies in other Western economies. We provide some reasons to believe a breakout in inflation is not far off.

We note that, following 9 years of inflationary monetary and balance sheet policy led by the US FED and coordinated with all western world central banks, re-emergence of inflation is conspicuous in its absence.

The ascendant risk facing Fixed Income Bond Funds at this current juncture is inflation.

The following chart illustrates the relationship between the US 10 Year Treasury Bond rate and the US CPI Year on Year non-seasonally adjusted (YOY CPI NSA) index.

![CPI YOY versus 10 year Treasury Source Bloomberg](chart.png)

This chart illustrates:
- the difference between Treasury yields and CPI is 0.134% at the end of September 2017, has averaged 2.12% since 1990 and only traded below zero on four occasions since October 1990.
- The current uptrend in YOY CPI is the strongest recovery from a zero base since 1990.

Looking ahead towards 31 January 2018 at inflation as measured by the US CPI YOY NSA we apply three scenarios for the period October 2017 to January 2018 to calculate a worst-case, expected, and best-case outcome for US CPI YOY NSA in the year to January 2018. Our calculations produce the following output.
It is worth pointing out that these outcomes are either equal to or greater than the Federal Reserve Board’s target rate of 2%.

The risk of Inflation rising significantly above the Central Bank target of 2% in the months ahead is further augmented by recent strength in commodity prices as illustrated by Copper rising 30% since May 2015.

The portfolio will remain 100% invested in floating rate notes as the above analysis reaffirms our view that higher interest rates still lie ahead.

Regarding credit margins we have seen credit spreads in the US BB corporate CLO market contract by 1.28% this calendar year and 0.20% this financial year. We expect fiscal easing to step up in the United States and continue in Australia and thus with improving prices in equity markets we expect further downward movement in High Yield Bond credit margins. This is positive for High Yield Bond prices and thus positive for our Fund’s performance.

All in all, we see good returns ahead for the Fund from both cash flow and capital improvement.

END
