Investment Philosophy

The investment philosophy of the Supervised Global Income Fund is one of "conservative opportunism". This means it is designed to reduce the risk of capital loss and deliver attractive quarterly income returns. Our investment philosophy aims to protect unitholders' capital by investing in securities that we have assessed are likely to repay 100% of principal and interest obligations in a worst case economic environment, such as the recent global financial crisis. Consistent with this investment philosophy, the Fund undertakes a qualitative and quantitative research process designed to discover the highest rated reward to risk debt investments available.

Our investment philosophy employs top down research on all major world economies. This is aimed at identifying the best growth economies worldwide. Then the best sectors and securities within the best growth economies are then identified. Subsequently, each security is subjected to individual research and scenario analysis to identify the highest rated reward to risk debt investments.

Investment Strategy

The Investment Manager will invest within the global and domestic debt markets. These investments may include but are not restricted to debt instruments such as; government treasury bonds, corporate bonds, bank bills, commercial paper, bank loans, mortgage backed securities, asset backed securities, mortgages, secured corporate loans, discounted bills, repurchase agreements and debt/equity hybrid securities, forward foreign exchange agreements, interest rate futures, options and interest rate swaps.

The strategy will concentrate the portfolio holdings to asset sectors and risk characteristics that deliver the lowest risk/highest reward ratio. Debt securities must be tested against historical worst case stress testing before they can qualify for investments. Only securities that meet our stringent risk stress parameters can be allocated for investment.
